Notes

Under the Trade Classifications column, the "O:" entry indicates that the world is owned by the world in the indicated hex. For example Justi is owned by Soyuz.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. If the Travel Zone digit is empty, it is a green zone, "A" and "R" indicate Amber and Red zones respectively.

Al is the Allegiance column: Li = Lucan's Imperium.

Narquel Subsector: In 1117, Narquel subsector had a population of almost 32.5 billion. Its highest population was 10 billion, on Gasudarsk. Its highest tech level was 15(F), at Aladon, Soyuz, Kampala, Apinar, Neto, Chuejou, Rakhaasha, Gasudarsk, Quelleff, Narquel, and Likitornot. All worlds belonged to Lucan's Imperium.

Larisa	0807	D588010-8	Ni Lo	204	Na	G1 V

Notes

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. Because there is no longer a Travellers' Aid Society or other such watchdog group, there are no travel zones in the Wilds. However, a "B" in the Travel Zone column indicates that the world is Balkanized and the government shown is the largest on the world.

Al is the Allegiance column: The "Na" code indicates a non-aligned world. Such a world may exist within an interstellar community, but have no ties to it, or may be non-aligned because it has virtually no off-world contact. The "--" indicator means that a world has no allegiance because it has no population.

Narquel Subsector: Narquel subsector has a New Era population of just over 10.65 billion, a decline of over 22 billion from its pre-Collapse population. Its highest population is 9 billion, at Bayse, and its highest tech level is 8, at Rann, Laagonaa, Essen, and Larisa. Three worlds have actually experienced a population increase over their pre-collapse levels: Bayse, Kampala, and Guard.

Notes

Under the Trade Classifications column, the "O:" entry indicates that the world is owned by the world in the indicated hex. For example Quafe is owned by Libert.

A "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. If the Travel Zone digit is empty, it is a green zone, "A" and "R" indicate Amber and Red zones respectively.

Al is the Allegiance column: Li = Lucan's Imperium.

Libert Subsector: In 1117, Libert subsector had a population of almost 64.3 billion. Its highest population was 50 billion, on Zeeland. Its highest tech level was 15(F), at Klenoy, Khunan, Libert, Gate, Ridge, Jesicar, Hakalau, and Talca. All worlds were part of Lucan's Imperium.

Notes

Under the Trade Classifications column, a "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. Because there is no longer a Travellers' Aid Society or other such watchdog group, there are no travel zones in the Wilds. However, a "B" in the Travel Zone column indicates that the world is Balkanized and the government shown is the largest on the world.

Al is the Allegiance column: The "Na" code indicates a non-aligned world. Such a world may exist within an interstellar community, but have no ties to it, or may be non-aligned because it has virtually no off-world contact. The "--" indicator means that a world has no allegiance because it has no population.

Libert Subsector: Libert subsector has a New Era population of just over 52.9 billion, a decline of over 11.36 billion from its pre-Collapse population. Its highest population is 50 billion, at Zeeland, and its highest tech level is 9, also at Zeeland. Three worlds have actually experienced a population increase over their pre collapse levels: Stanton, Arhaapar, and Mixem. Since Zeeland never had a class A starport, it never had the capability to build starships. Its exceptional environment made it less susceptible to the Collapse and aided in quick recovery from its effects. Stanton has also enjoyed a good environment and a relatively high tech level.

Notes

Under the Trade Classifications column, the "O:" entry indicates that the world is owned by the world in the indicated hex. For example Grouard is owned by Sufren.

A "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. If the Travel Zone digit is empty, it is a green zone, "A" and "R" indicate Amber and Red zones respectively.

Al is the Allegiance column: Bc = Backman Cluster, Li = Lucan's Imperium, Ma = Margaret's Domain.

Sufren Subsector: In 1117, Sufren subsector had a population of almost 120 billion. Its highest population was 70 billion, on Hervestia. Its highest tech level was 15(F), at Onliu, Boyne, Maelstrom, Sturgis, Haze, Sufren, Dahl, Lassie, White Sea, and Aazuni. The worlds of Sufren subsector were divided between Lucan's Imperium, Margaret's Domain, and the Backman Cluster. The politics of the Union of Sufren and the Vassalry Judiciate would soon arise in the vacuum left as Lucan's and Margaret's forces pulled back to the safe areas.

Notes

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. Because there is no longer a Travellers' Aid Society or other such watchdog group, there are no travel zones in the Wilds. However, a "B" in the Travel Zone column indicates that the world is Balkanized and the government shown is the largest on the world.

Al is the Allegiance column: The "Na" code indicates a non-aligned world. Such a world may exist within an interstellar community, but have no ties to it, or may be non-aligned because it has virtually no off-world contact. The "--" indicator means that a world has no allegiance because it has no population. Cs = Covenant of Sufren.

Sufren Subsector: Sufren subsector has a New Era population of just over 9.41 billion, a decline of over 110 billion from its pre-Collapse population. Its highest population is 7 billion, at Sufren, and its highest tech level is 12(C) as Sufren. Two worlds have actually experienced a population increase over their pre-Collapse levels: Sufren and Mazuun.

Notes

Under the Trade Classifications column, the "O:" entry indicates that the world is owned by the world in the indicated hex. For example Ashiizar is owned by Forward.

A "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. If the Travel Zone digit is empty, it is a green zone, "A" and "R" indicate Amber and Red zones respectively.

Al is the Allegiance column: Ma = Margaret's Domain.

Khavle Subsector: In 1117, Khavle Subsector had a population of almost 83.2 billion. Its highest population was 70 billion, on Aight. Its highest tech level was 15(F), at Medora, Fuso, Khavle, Daasha, Gorakpur, Lar, Dordogne, Nihesi, Toggle, Wake, Ningho, Rockcaster, and Dehrapur. All worlds in Khavle Subsector belonged to Margaret's Domain.

Notes

Under the Trade Classifications column, a "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. Because there is no longer a Travellers' Aid Society or other such watchdog group, there are no travel zones in the Wilds. However, a "B" in the Travel Zone column indicates that the world is Balkanized and the government shown is the largest on the world.

Al is the Allegiance column: The "Na" code indicates a non-aligned world. Such a world may exist within an interstellar community, but have no ties to it, or may be non-aligned because it has virtually no off-world contact. The "--" indicator means that a world has no allegiance because it has no population.

Khavle Subsector: Khavle subsector has a New Era population of just over 2 billion, a decline of over 81 billion from its pre-Collapse population. Its highest population is 700 million, at Ashii, and its highest tech level is 9, at Accra. Four worlds have actually experienced a population increase over their pre-Collapse levels: Accra, Farm, Ashii, and Savan. Ashii was formerly known as 183-361. Muuze has one inhabitant left, and is in danger of becoming barren.

Notes

Under the Trade Classifications column, the "O:" entry indicates that the world is owned by the world in the indicated hex. For example Ninja is owned by Terra Far.

A "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. If the Travel Zone digit is empty, it is a green zone, "A" and "R" indicate Amber and Red zones respectively.

Al is the Allegiance column: Fd = Federation of Daibei, Li = Lucan's Imperium.

Shadigi Subsector: In 1117, Shadigi subsector had a population of almost 3.84 billion. Its highest population was 2 billion, on Ferry. Its highest tech level was 15(F), at Zeranga, Baanis, Terra Far, Quota, Ferry, Futatsu, and Vaasa. Several of the spinward worlds had been absorbed by the Federation of Daibei, but most world still belonged to Lucan's Imperium.

Notes

Under the Trade Classifications column, a "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. Because there is no longer a Travellers' Aid Society or other such watchdog group, there are no travel zones in the Wilds. However, a "B" in the Travel Zone column indicates that the world is Balkanized and the government shown is the largest on the world.

Al is the Allegiance column: The "Na" code indicates a non-aligned world. Such a world may exist within an interstellar community, but have no ties to it, or may be non-aligned because it has virtually no off-world contact. The "--" indicator means that a world has no allegiance because it has no population.

Kushga Subsector: Kushga subsector has a New Era population of just over 916 million, a decline of over 8.45 billion from its pre-Collapse population. Its highest population is 800 million, at Lerun, and its highest tech level is 9, at Arriba. Three worlds have actually experienced a population increase over their pre-Collapse levels: Lerun, Atabano, and Accokeek.

Notes

Under the Trade Classifications column, the "O:" entry indicates that the world is owned by the world in the indicated hex. For example Trot is owned by Hewes.

A "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. If the Travel Zone digit is empty, it is a green zone, "A" and "R" indicate Amber and Red zones respectively.

Al is the Allegiance column: Bc = Backman Cluster, Dr = Droyne World, Li = Lucan's Imperium, Ma = Margaret's Domain.

Alurza Subsector: In 1117, Alurza Subsector had a population of almost 47.61 billion. Its highest population was 30 billion, on Layne. Its highest tech level was 15(F), at Remington, Tigo, Arrow Rock, Feeble, Kandom, Princess, Hold, Yossem, Beep, Hewes, and Chief. Most worlds of Alurza belong to Lucan's Imperium, but some belong to Margaret's Domain or the Backman Cluster. Umorphutwyo is a Droyne world.

Notes

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. Because there is no longer a Travellers' Aid Society or other such watchdog group, there are no travel zones in the Wilds. However, a "B" in the Travel Zone column indicates that the world is Balkanized and the government shown is the largest on the world.

Al is the Allegiance column: The "Na" code indicates a non-aligned world. Such a world may exist within an interstellar community, but have no ties to it, or may be non-aligned because it has virtually no off-world contact. The "--" indicator means that a world has no allegiance because it has no population.

Alurza Subsector: Alurza subsector has a New Era population of just over 1.26 billion, a decline of over 46 billion from its pre-Collapse population. Its highest population is 700 million, at Kandom, and its highest tech level is 8, at Dryden, Raymore, and Bifirs. The world of Dryden has experienced a population increase over its pre-Collapse level. Only one inhabitant remains of the world of Shaanii.

Notes

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. Because there is no longer a Travellers' Aid Society or other such watchdog group, there are no travel zones in the Wilds. However, a "B" in the Travel Zone column indicates that the world is Balkanized and the government shown is the largest on the world.

Al is the Allegiance column: The "Na" code indicates a non-aligned world. Such a world may exist within an interstellar community, but have no ties to it, or may be non-aligned because it has virtually no off-world contact. The "--" indicator means that a world has no allegiance because it has no population.

Ebasha Subsector: Ebasha subsector has a New Era population of just over 125 million, a decline of over 95 billion from its pre-Collapse population. Its highest population is 100 million, at Six Gun, and its highest tech level is 8, at Rouen. No worlds in Ebasha Subsector have experienced a population increase over their pre-Collapse levels.

Notes

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. Because there is no longer a Travellers' Aid Society or other such watchdog group, there are no travel zones in the Wilds. However, a "B" in the Travel Zone column indicates that the world is Balkanized and the government shown is the largest on the world.

Al is the Allegiance column: The "Na" code indicates a non-aligned world. Such a world may exist within an interstellar community, but have no ties to it, or may be non-aligned because it has virtually no off-world contact. The "--" indicator means that a world has no allegiance because it has no population.

Iusea Subsector: Iusea subsector has a New Era population of just over 1.32 billion, a decline of over 29.86 billion from its pre-Collapse population. Its highest population is 500 million, at Ledge, and its highest tech level is 8, at Wellun. Three worlds have actually experienced a population increase over their pre collapse levels: Gegaasha, Kennebunk, and Ebekhar.

Notes

Under the Trade Classifications column, the "O:" entry indicates that the world is owned by the world in the indicated hex. For example Veejay is owned by Layne (2420 Alurza).

A "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. If the Travel Zone digit is empty, it is a green zone, "A" and "R" indicate Amber and Red zones respectively.

Al is the Allegiance column: Li = Lucan's Imperium.

The Blight Subsector: In 1117, The Blight subsector had a population of almost 10.5 billion. Its highest population was 9 billion, on Thicket. Its highest tech level was 15(F), at Overature, Heart, Veejay, and Ayden. All worlds of The Blight subsector belonged to Lucan's Imperium.

Notes

Under the Trade Classifications column, the "O:" entry indicates that the world is owned by the world in the indicated hex. For example Ijiwa is owned by Promise.

A "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. If the Travel Zone digit is empty, it is a green zone, "A" and "R" indicate Amber and Red zones respectively.

Al is the Allegiance column: Li = Lucan's Imperium, So = Solomani Confederation.

Promise Subsector: In 1117, Promise subsector had a population of almost 6.93 billion. Its highest population was 5 billion, on Promise. Its highest tech level was 15(F), at Ferenira, Exeter, Promise, Orsk, Lot, Vahana, Udone, Gorky, Tenmet, Tazmania, Ijiwa, and Cosenza. Most of the worlds of Promise subsector remained loyal to Lucan's Imperium, although several worlds on the rimward end belonged to the Solomani Confederation.

Notes

Under the Trade Classifications column, the "O:" entry indicates that the world is owned by the world in the indicated hex. For example Fuquay is owned by Cumber.

A "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. If the Travel Zone digit is empty, it is a green zone, "A" and "R" indicate Amber and Red zones respectively.

Al is the Allegiance column: Li = Lucan's Imperium, So = Solomani Confederation.

Hijiri Subsector: In 1117, Hijiri subsector had a population of almost 24.55 billion. Its highest population was 9 billion, on Sunz. Its highest tech level was 15(F), at Vision, Cumber, Sheshene, Akureyri, Fuquay, Pettelli, and Domo. The worlds of Hijiri subsector are divided between Lucan's Imperium and the Solomani Confederation.

Khasiigu	0840	D580336-7	Ni De Lo	203	Na	F6 V

Notes

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. Because there is no longer a Travellers' Aid Society or other such watchdog group, there are no travel zones in the Wilds. However, a "B" in the Travel Zone column indicates that the world is Balkanized and the government shown is the largest on the world.

Al is the Allegiance column: The "Na" code indicates a non-aligned world. Such a world may exist within an interstellar community, but have no ties to it, or may be non-aligned because it has virtually no off-world contact. The "--" indicator means that a world has no allegiance because it has no population.

Hijiri Subsector: Hijiri subsector has a New Era population of just over 15.41 billion, a decline of over 9.14 billion from its pre-Collapse population. Its highest population is 9 billion, at Sunz, and its highest tech level is 9, at Varina. No worlds in Hijiri subsector have experienced an increase in population above their pre-collapse levels.

Notes

Under the Trade Classifications column, the "O:" entry indicates that the world is owned by the world in the indicated hex. For example Agiruur is owned by Gresham.

A "D:" or "C:" entry indicates a planet populated at least in part by Droyne or Chirpers (effectively degenerated Droyne). The number following the colon indicates how many tenths of that world's total population consist of these races.

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. If the Travel Zone digit is empty, it is a green zone, "A" and "R" indicate Amber and Red zones respectively.

Al is the Allegiance column: Li = Lucan's Imperium, So = Solomani Confederation.

Khulam Subsector: In 1117, Khulam had a population of almost 8.337 billion. Its highest population was 8 billion, on Gresham. Its highest tech level was 15(F), at Acorn, Quarry, Mitchell, and Gresham. All but one world of the subsector was aligned with the Solomani Confederation, while only Boley remained loyal to Lucan's Imperium.

KHULAM SUBSECTOR
 Subsector P of Diaspora Sector)
 (New Era data, as of 001-1201)

Notes

TPPG indicates Travel Zone, Population Multiplier, Planetoid Belts, and Gas Giants. Because there is no longer a Travellers' Aid Society or other such watchdog group, there are no travel zones in the Wilds. However, a "B" in the Travel Zone column indicates that the world is Balkanized and the government shown is the largest on the world.

Al is the Allegiance column: The "Na" code indicates a non-aligned world. Such a world may exist within an interstellar community, but have no ties to it, or may be non-aligned because it has virtually no off-world contact. The "--" indicator means that a world has no allegiance because it has no population.

Khulam Subsector: Khulam subsector has a New Era population of just over 260.4 million, a decline of over 8 billion from its pre-Collapse population. Its highest population is 200 million, at Lebherz, and its highest tech level is 8, at Kide. Three worlds have actually experienced a population increase over their pre-Collapse levels: Montezuma, Kide, and Futok.
